

HANDVÄRK

F U R N I T U R E
Leather care & maintenance guide

HANDVÄRK only use aniline leather. Aniline leather is dyed exclusively with soluble dyes without covering the surface with a topcoat paint or insoluble pigments. The result is a product that retains the leather's natural surface with the 'grain'-fully showing the original structure.

PRE-TREATMENT

The leather has a thin protective top coat to protect it from wear and staining. We recommend treating the leather 1-2 times a year with a high-quality leather conditioner or similar e.g. LEATHER CLEAN & PROTECT from Leather Master.

DAILY CLEANING

For daily cleaning, use a clean, dry cloth. Vacuum the product regularly, giving attention to the crevices of the product.

REMOVAL OF STAINS

We recommend LEATHER CLEAN & PROTECT from Leather Master.
